

GRAFFSTOP IS A REVOLUTIONARY ANTI-GRAFFITI COATING SYSTEM, PROVIDING A HIGHLY EFFECTIVE, LOW COST FORM OF LONG-LASTING PROTECTION AGAINST GRAFFITI.

CLEARING GRAFFITI

Graffiti removal has traditionally been a labour intensive and expensive exercise, requiring the use of chemicals and abrasion to achieve a passable result. Furthermore, removal can cause even more damage than the anti-social graffiti.

GraffStop means there is no longer a need for the use of hazardous, toxic chemicals or specialist equipment to clear and protect against unsightly and often highly offensive graffiti.

UNIQUE FORMULATION

Developed by Garrandale's own in-house chemists, the GraffStop range is completely unlike any other system on the market.

Our unique formulation allows GraffStop to deliver stunning results. GraffStop has been tried, tested and approved to the highest industrial standard for all civil and heritage sites.

NO CHEMICALS - JUST TAP WATER!

A single pack polymer, it can easily be applied by spray, brush or roller to porous and non-porous surfaces, allowing graffiti to be simply and quickly washed away using nothing more than tap water.

LONG LASTING SOLUTION

GraffStop is a self-healing, environmentally safe solution that will leave any surface completely vandal-proof, year after year, drastically lowering maintenance costs and removing the need for specialist equipment and training.

COLOUR MATCHED

Because it can be colour matched to suit any existing design, it proves a long-term solution for any surface.

MEETING STANDARDS

GraffStop products meets BS 6853 Measurement of Smoke Density. BS 4756/7 Surface Spread of Flame and BS 6853 Toxicity Fume Test.

GraffStop is, therefore, suitable for application in numerous environments and on a wide range of materials including stainless steel, pre-painted surfaces, brick, stone, concrete and wood.

GraffStop also meets all London Underground and Network Rail standards making it the perfect solution for the rail industry and public transport sector in the constant fight against graffiti

GRAFFSTOP HARD COAT GRAFFITI PROTECTION

Railway Infrastructure

Graffiti removal has always been labour-intensive, traditionally requiring the use of chemicals and abrasion to achieve a passable result or to constantly repaint over the graffiti. These methods have cost rail companies and Network Rail millions of pounds over the years, London Underground alone were reportedly spending £10 Million per year tackling the problem. We firmly believe that Graffstop™ is the finest and most cost effective solution to the age old problem of graffiti. It already enjoys success throughout Europe, where in Belgium and Ireland it is used to protect buildings and bridges, and in Spain where its use by train operators is increasing each day.

Although it was developed to safeguard trains and buses, this coating can be applied to pretty much anything non-porous making the possible applications huge. It has been used to coat bridges and walkways, decorative metal sculptures and seating, even steel shutter doors. Graffstop® hard coat, can be sprayed or painted onto any non-porous surfaces in its two part formula, and once dry it forms a hard shell which prevents any graffiti from adhering properly.

- * Can be applied to all internal and external parts of the vehicle
- * Gives exceptional anti graffiti release properties when cured
- * Allows graffiti to be removed with mild detergent.

GRAFFITI SOLUTIONS

Our range of anti graffiti coatings are the solution to the headache of unsightly graffiti and its removal. The full range of coatings have been developed to provide a solution for almost every surface material, we even have an anti-graffiti coating for glass! Our products can save you vast amounts of time and money when trying to keep the blight of graffiti from your business or vehicles.

- * Unique coating guaranteed for 20 years
- * Requires no chemicals or abrasion for 100% clean
- * Uses only water to remove graffiti
- * The most cost effective solution to graffiti removal and surface protection
- * Proven in Manchester's Exchange Square and Blackpool's Sea Front

GRAFFSTOP CRYSTAL WINDOW FILM

The final element safeguarding assets from destructive railway vandals, is our remedial treatment for acid etched and scratched windows. Our engineers polish out any damage and then apply a special film to the scratched glass, which returns it to original clarity. If vandals scratch the restored windows in future they will simply damage the film which can then be replaced. GraffStop CFP provides a lasting solution to glass vandalism, preventing unsightly damage, and saving the extreme costs of replacing carriage windows.
